

# Detecting route announcements of unassigned IP address

---

Kentaro Goto

Waseda univ. Uchida lab

Route Research Expert Team

WASEDA University

- Our purpose

To better understand the reality of  
“unexpected” route announcements

- Compared IPv4 full route

with IPv4 address pool in JPNIC

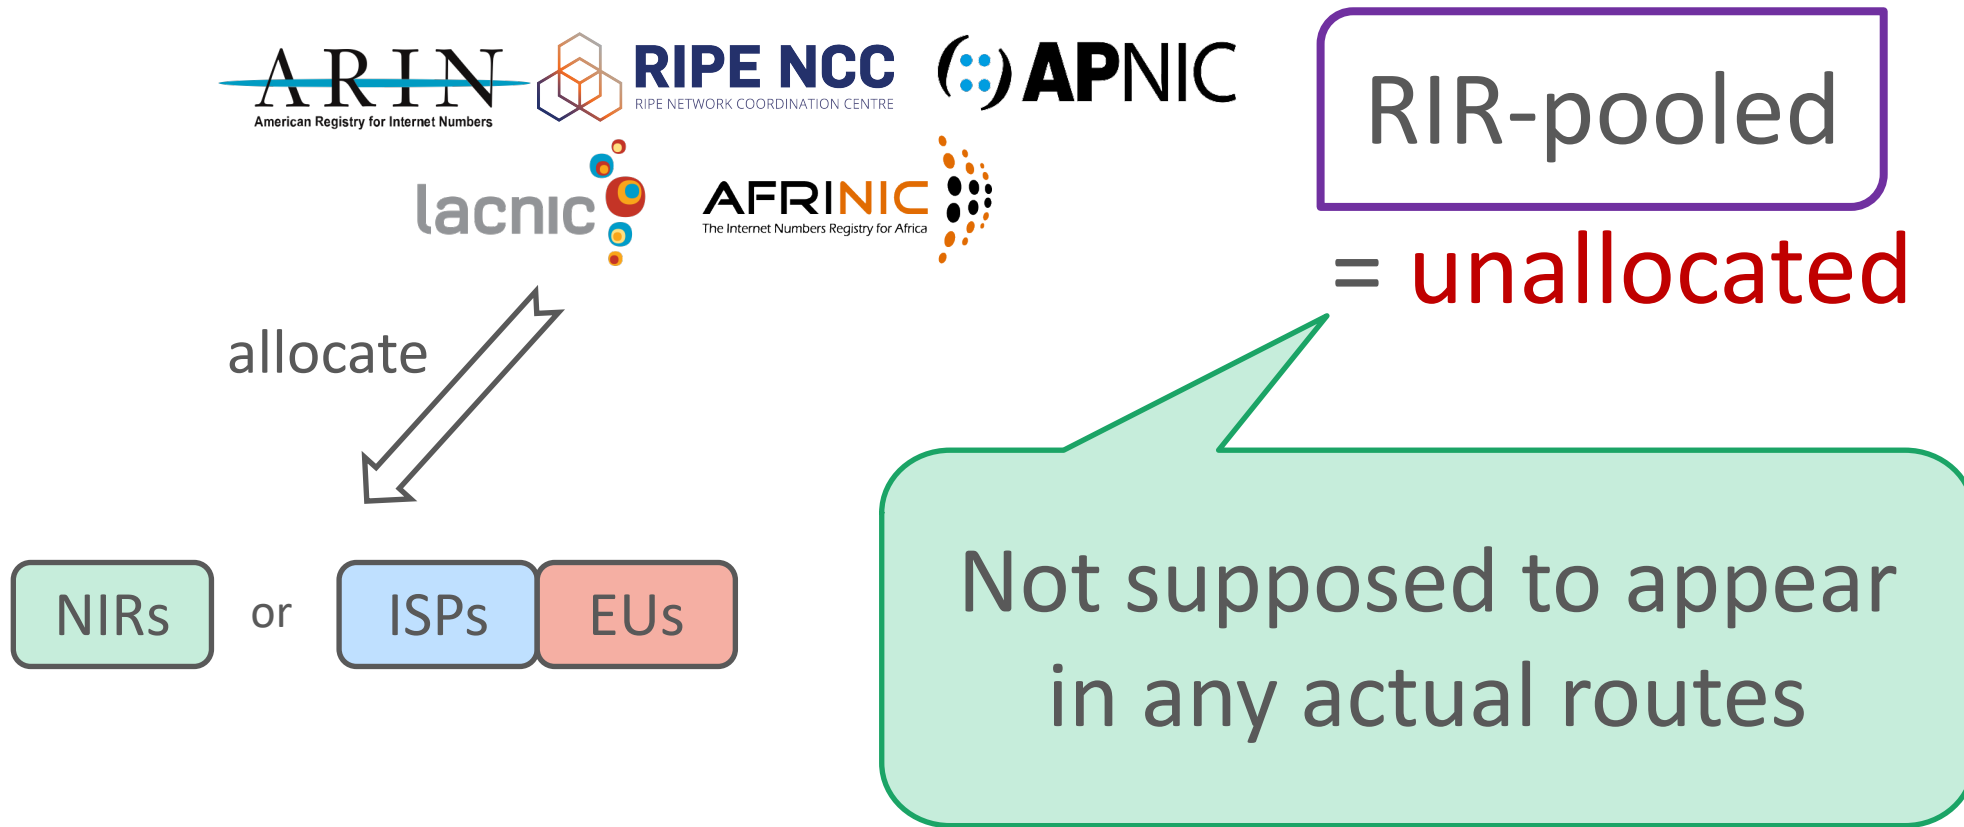

- Found 3 different route announcements

-- 3 separate /24 networks

# Background info – Related works (1/2)

2

Research about unallocated prefixes from RIRs exists

- RIR-allocation progresses

- FTP sites by APNIC

<http://ftp.apnic.net/stats/apnic/>

- Mis-announced address space/AS numbers

- For “bad” address

<http://thyme.apnic.net/current/data-add-IANA>

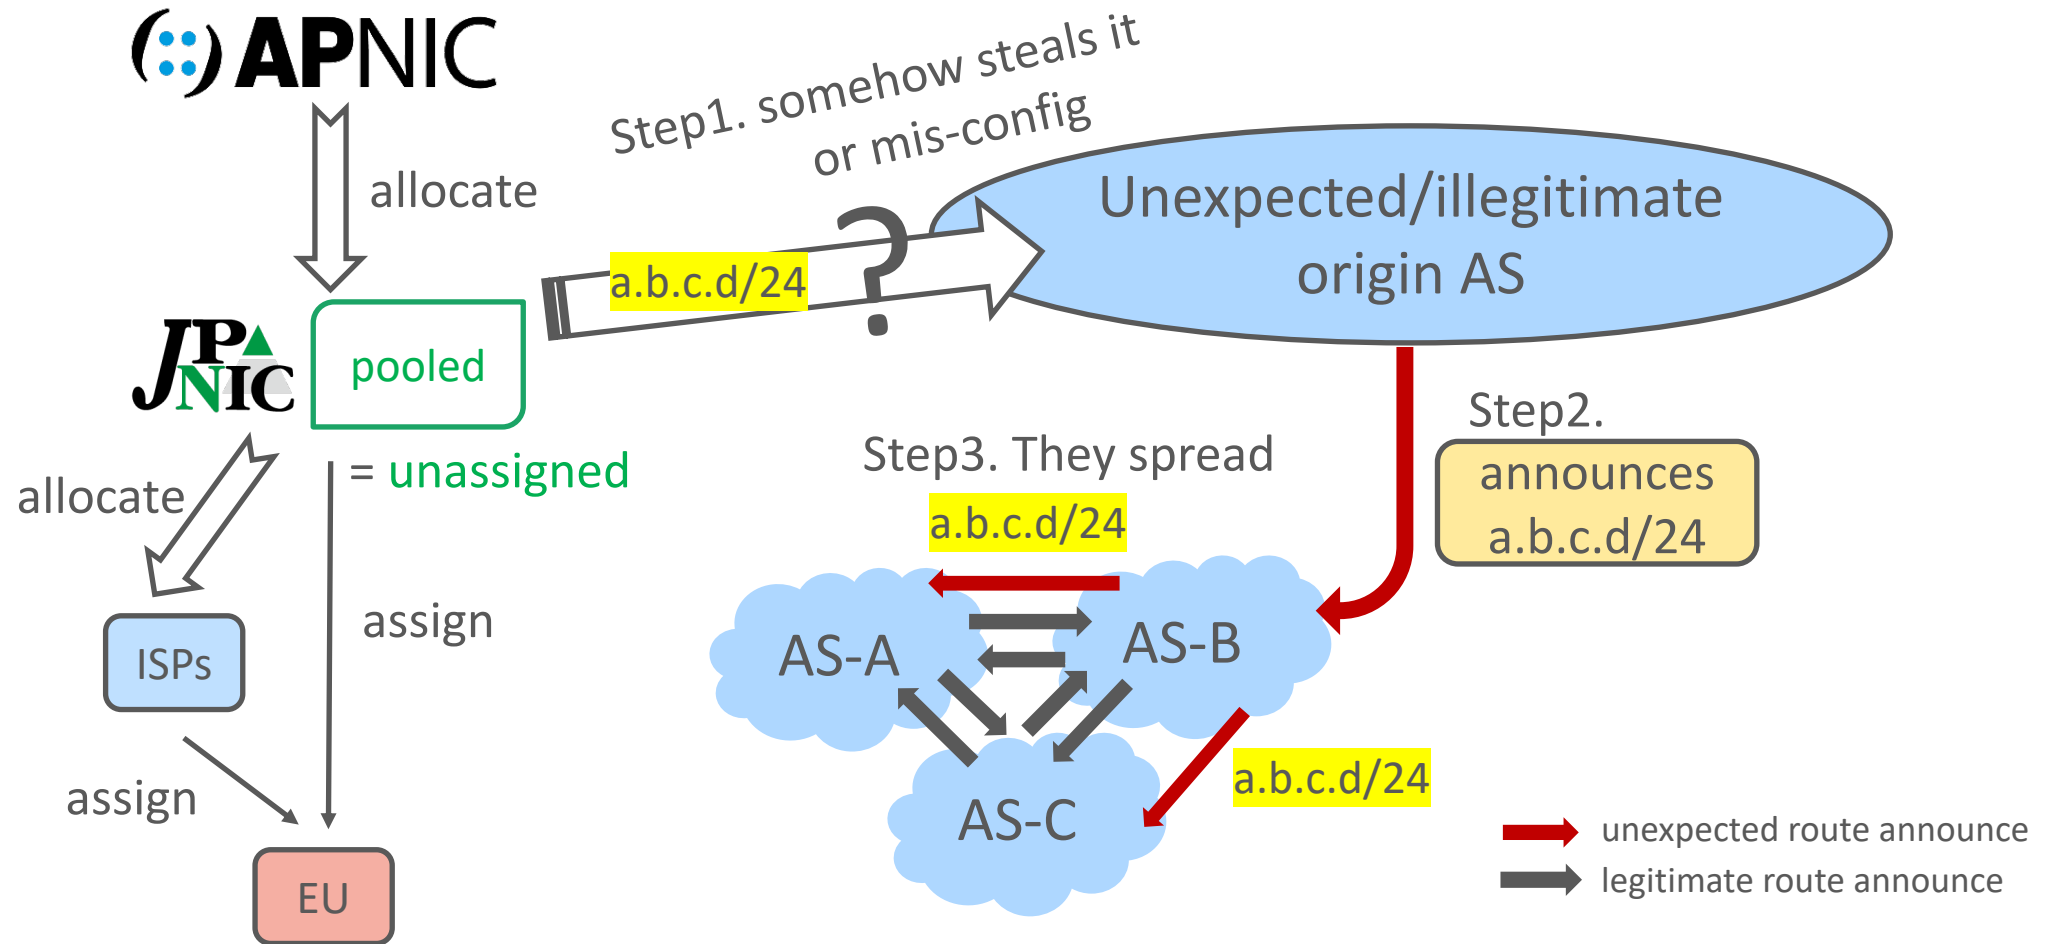

- For “bad” AS

<http://thyme.apnic.net/current/data-badAS>

What about  
NIR-pooled addresses?

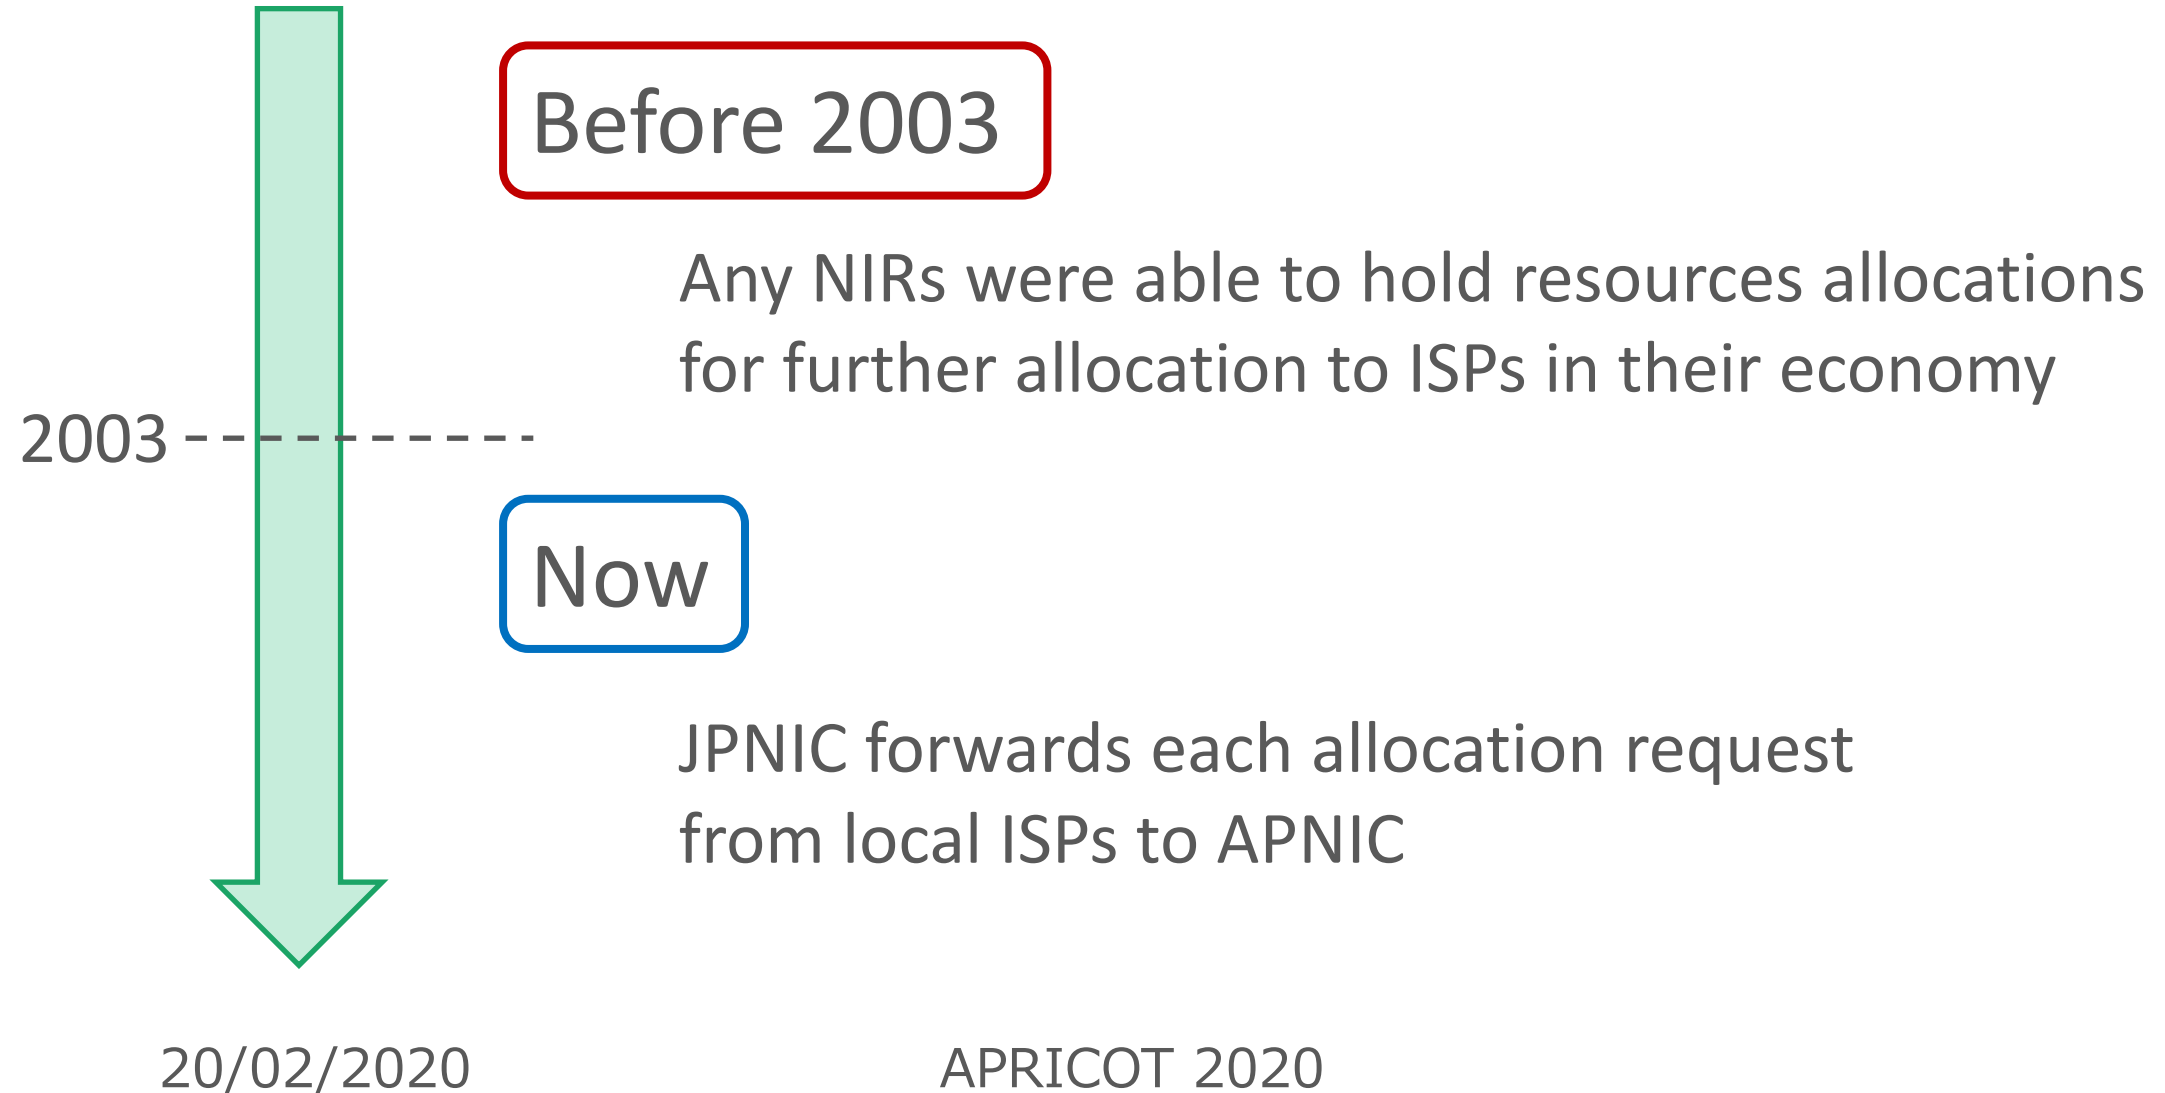

# Background info - stakeholders

## Unassigned IP addresses announced

No match!!

Reference: WHOIS servers of RIRs

[APNIC WHOIS\(whois.apnic.net\)](http://whois.apnic.net)

[ARIN WHOIS\(whois.arin.net\)](http://whois.arin.net)

[RIPE WHOIS\(whois.ripe.net\)](http://whois.ripe.net)

[LACNIC WHOIS\(whois.lacnic.net\)](http://whois.lacnic.net)

[AfrinIC WHOIS\(whois.afrinic.net\)](http://whois.afrinic.net)

Not found in JPNIC WHOIS

Prefix Overview ( [REDACTED] /24)

Routing

information (RIS)

Is visible as  
exact match

...but visible in RIPEstat

Unassigned IP networks are announced  
in the Internet

Overview again

Compare **IPv4 full route** with **IPv4 address pool** in JPNIC

Detect **unassigned** networks announced as **routes**

Search for details on route monitoring system

(1) Announced  $\cap$  (2) unassigned

(1) Announced IP prefixes

192.0.2.0/24  
aa.bbb.xx.y/16  
aa.bbb.ss.t/8  
203.0.113.0/24  
...

$\cap$  (AND)

(2) Unassigned IP Addresses

aa.bbb.xx.y/21  
aa.bbb.ss.t/24  
...

Announced  $\cap$  Unassigned

aa.bbb.xx.y/21  
aa.bbb.ss.t/24

## (1) Announced IP prefixes

- Downloaded from RIPE RIS\*
- Around **800,000** announcements
- Size equivalent to around **15,341,353** /24 networks

\*RIS: Routing Information Service

rcc06.ripe.net  
Otemachi, Japan. Collects route updates  
announced by JPIX members from Aug. 2001

## (2) Unassigned IPv4 Addresses

- Calculated from JPNIC database (10<sup>th</sup> Dec 2019)
- Size equivalent to **14,497** /24 networks
- Needless to say ...
  - NOT open to the public
  - NO IPv6 included

Reading Route info/JPNIC database csv  
**pandas**

Extracting Announced && Unassigned  
**netaddr, ipaddress**

For network addresses manipulation

- netaddr – [IPSet\(\)](https://netaddr.readthedocs.io/en/latest/introduction.html)  
<https://netaddr.readthedocs.io/en/latest/introduction.html>
- ipaddress  
<https://docs.python.org/3/library/ipaddress.html>

Detected 3 **unassigned** networks announced in **route information**

Search them on **RIPEstat** for details

The screenshot shows the RIPE NCC website header with the logo and navigation links. The main content area features the 'RIPEstat' search interface, which includes a search input field, a 'Go' button, and a 'Your network' section. A red dashed box highlights the search area, and a red dashed arrow points from the text 'Search them on RIPEstat for details' to the search input field.

RIPE NCC  
RIPE NETWORK COORDINATION CENTRE

RIPE Database (Whois) Website

Search the content of this website

Manage IPs and ASNs > Analyse > Participate > Get Support > Publications > About Us >

You are here: Home > Analyse > Statistics > RIPEstat

**RIPEstat**

Enter an IP address/prefix, ASN, country code or hostname

Go

Your network: AS2515, 2001:dc2::/32

Try one of these: IPv4 prefix, IPv4 range, IPv6, ASN

# Results verification - example

15

```
→ lab (master) x host whois.nic.ad.jp  
whois.nic.ad.jp has address 58.84.254.30  
whois.nic.ad.jp has address 192.41.192.40
```

JPNIC office IP prefix 192.41.192.0/24

APRICOT 2020

- from an AS in Japan

- Previously was **returned** to JPNIC  
...but announcement settings has not followed

- from an AS in S.Korea

- Withdrawn after contact
- **Mis-config**

- from an AS in Hong Kong

- Withdrawn after contact
- **Mis-config**

Found 3 **unassigned** networks announced in **route information**

Even unused IP addresses are routed in the Internet  
... **not an organisation dependent problem**

- Active monitoring
  - ping them all
- Investigate open ports on the hosts in the detected IP networks to see their purposes
- IRR search for more info?
- Further research for other regions
- Further research involving malicious domain names
- Anomaly detection by machine learning

- Public GitHub repository

<https://anonymous.4open.science/r/0d8ee868-194c-48b0-a17d-c58b17837596/>

- A simple python script
- Applicable to arbitrary IP prefixes pool
  - So please give it a try

Thank you

# RIPEstat search results for RIR/RPKI info
